## ABOUT THE SPECIES

Taller than a modern moose, with wider antlers.

Ice Age elk of northern Eurasia stood well above their living descendants. The mounted skeleton is over three metres long, the antlers spread beyond the animal's own height. It browsed willow and birch along river valleys — the same valleys where its bones are now found.

## HEIGHT AGAINST A PERSON

240 cm  
Elk, on its stand

175 cm  
A person

# What travels with the specimen.

## Legally excavated

Every specimen was recovered under permit in the Perm region and the Tyumen region of Russia and left the country with an export licence. Copies travel with the specimen.

## Condition report

Each bone is listed: original, restored or replica. Replicas are used only where a part never fossilises — rhinoceros horns, for example — and are always declared.

## Delivery and installation

Mounts are taken down, crated and shipped worldwide. Our preparators can reassemble the skeleton on site.
